

## EasyLobby SVM™ , SVM™ Multi-Tenant, and SVM™ for Schools

EasyLobby SVM is our newest and most feature rich visitor management software program. SVM stands for Secure Visitor Management and represents a major upgrade from the previous version of EasyLobby's highly successful visitor management software.

### **SVM Benefits:**

- Streamline the check-in process
- Capture detailed visitor information accurately and automatically (without typing)
- Perform analysis and reporting on visitor data
- Keep visitor and company information confidential
- Provide high quality, professional looking badges to visitors and employees
- Enhance your security image and make your visitors and employees feel safer
- Completely automate the process of pre-registering visitors
- Easily network multiple locations to share a single visitor database

The paper guest book or sign-in sheet is difficult to read, impossible to analyze, and allows people to readily see who has visited or is currently visiting your company and which employees were involved. In contrast, EasyLobby SVM brings you increased physical security as well as data security, a more professional way of greeting and processing visitors to your facilities, and a permanent record of who was in your building when and for what purpose.

### **SVM Features and Functions:**

- ODBC compliant support for Oracle and Microsoft SQL Server databases
- An advanced Application Programming Interface (API) for easily integrating SVM with any Access Control, HR, or CRM application
- The ability to automatically capture visitor information from a drivers license (by reading the magstripe or 2D barcode on the back of most US and Canadian licenses) or a business card (with an OCR-based card scanner)
- The ability to capture visitor photos and signatures
- Support for creating Contractor/Consultant badges that can be used for multi-day check in and check out using a simple bar code scanner and valid from/to dates and times
- Comprehensive support for Multi-Tenant buildings, both commercial and residential, including the ability for tenants to pre-register their visitors over the internet, irrespective of internal building network configuration or firewall issues
- The ability to print Employee ID cards in full color, plus over 200 built-in Visitor badge templates to choose from, and a new point-and-click Badge Designer for quickly and easily creating custom badge designs
- An Access Control List feature which automatically matches new visitor names and faces with a customer defined list of unwelcome people (known criminals, ex-employees, spouses under restraining order, etc.)
- A comprehensive package management system for tracking parcels that come into the facility
- The ability to automatically notify employees by email that their visitor or package has arrived in the lobby
- The ability for authorized employees to pre-register visitors over the internet, intranet or via email (requires eAdvance)
- Multiple options for quick check-out, including barcode scanning and license swiping

- An intuitive, easy to use interface, with 4 different levels of log-in security to protect valuable company data and program settings
