Supplemental lubrication of Mortise Door Lock Models with Pivoting Dead Latch

Some mortise door locks equipped with pivoting dead latches may require additional internal lubrication to ensure optimal operation. This procedure should be performed for all new installations and existing locks in service. Inject white lithium grease as follows:

- Push latch to right and depress.
- Spray white lithium grease into the left inside wall of the lock body for 2-3 seconds.
- Release latch.

- Push latch to left and depress.
- Spray white lithium grease into the right inside wall of the lock body for 2-3 seconds.
- Release latch.

Recommended **White Lithium Greases** are available at **MSC Industrial Supply Co.**
